The MacBook is better than the Spectre due to several things like it's superior resolution, smaller overall size, and better battery life. Besides, Apple's quality can't compete with HP quality. The wonderful style of the MacBook air is perfect. It is the lightest and smallest machine. It offers the best performance and it's battery life is better than the specter's. The computer operating system is easy to use and bloat-free. Also, Apple's service is legendary with many tech-support centers.
